

## Digital Retinal Imaging

Dr. Barden recommends retinal imaging for all patients. It provides a good baseline for your record and helps screen for certain eye diseases.

It is **especially important** for:

- New patients
- Family or personal history of glaucoma or macular degeneration
- Family or personal history of diabetes or cardiovascular disease

If, during the course of the examination, the doctor determines that a medical eye problem exists, we will bill your medical insurance.

If the examination shows a healthy eye, there will be a fee of \$39 that is not paid by most insurances.

\_\_\_\_\_ I would like to have digital retinal photos taken

\_\_\_\_\_ I do not want digital retinal photos taken

\_\_\_\_\_ I would like more information
